Dear Commissioners:

I am writing to you in support of increased energy efficiency requirements as a part of the APS rate case and as a part of the commission workshops on energy efficiency. Energy efficiency is extremely important: it is the cleanest & cheapest energy source we have. We need to increase energy efficiency efforts. To me, energy efficiency is the wisest thing we can do to meet our energy needs.

Energy efficiency is great for many reasons: it helps to save businesses & individuals money, reduces water consumption (for things like nuclear energy production), alleviates some air pollution & health issues associated with polluting energy sources such as coal.

Energy efficiency should be a top priority.

Please make this happen.

Yours truly,

Patrice Teng
